

# VRP300 VACUUM FLOW CONTROL

VRP vacuum flow controls are exclusively designed to control the flow of liquids, gases or both simultaneously. The VRP flow control allows for full media flow at vacuum depths less than the preset setting. As the vacuum depth nears the set point, the VRP begins to close; once reaching the set point, the unit closes completely. Once closed, no additional media flow can occur until the vacuum depth falls under the preset setting.

Part Number	Price
VRP300 Delrin-EPDM	\$189.05
Peak-Kalrez	\$699.00
VRP300-B (Optional Bracket)	\$4.95
